RSVP: _____

Requirements _____

Thanks from me, and everyone at CMV Action!

2-3 babies are born with congenital Cytomegalovirus (cCMV) every day. It is the most common infection at birth in the UK and a major cause of childhood disability. Whilst CMV is a common virus that can infect anyone with no lasting effects, it can cause life changing complications to unborn babies. Congenital CMV infection occurs when a mother contracts the virus and unknowingly passes it to her unborn baby. It can cause permanent birth defects such as profound Deafness, Vision Loss, Cerebral Palsy, Epilepsy, Autism and Severe Learning Difficulties.

CMV Action is a registered charity run by passionate and experienced volunteer Trustees. We work with families and health professionals to support and raise CMV awareness. We also work alongside medical experts to provide up to date researched information specifically for health professionals about the ways to reduce this common but dangerous and life threatening virus.
